

TRULINX. THERE'S AN APP FOR THAT?

You betcha!

TrulinX Mobile is the powerful web application service that connects TrulinX and your smart phones & tablets in virtually real time. Getting business data to your mobile sales and management team used to be a daunting and inefficient task. Using new technologies such as smart phones & tablets, push technology, and broadband cellular networks, your data is now easily available.

Sales and management now have the ability to easily browse through customers, vendors, orders, quotes, purchase orders, item availability, and more. Order and Quote notifications keep your sales and management up to date with customer specific alerts sent directly to your handheld based on dollar amounts, margins and more. Increase your sales and service level while reducing your costs, spend more time with your customers and less in the office.
